

1. Title Page: Software Requirement Specification (SRS) for IRO (Issues Reporting Outlet)

2. 1. Introduction: "The IRO system is a web-based platform designed to bridge the communication gap between AAUA community members and the authorities."

3. 2. Functional Requirements (What the system MUST do):

- FR1: The system shall allow users to submit a new issue report via a web form.
- FR2: The system shall categorize issues (e.g., Security, Infrastructure).
- FR3: The system shall allow users to specify their status (Student/Indigene).
- FR4: (If applicable) The system shall allow an admin to view and manage submitted issues.

4. 3. Non-Functional Requirements (How the system should be - quality attributes):

- NFR1 (Usability): The user interface shall be simple, intuitive, and mobile-friendly.
- NFR2 (Security): User data (names, emails) shall be handled with confidentiality and not be publicly exposed.
- NFR3 (Performance): The system's web pages should load in under 3 seconds.
- NFR4 (Availability): The system should be accessible to users 24/7.

5. 4. Major Components: List the parts of your system.

- User Interface: The HTML page you created.
- Database: (Mention it would store reports, even if you haven't built it).
- Form Handler: (The part that would process the form data).

6. 5. Constraints: "The initial prototype is developed using HTML and CSS due to time constraints."
